Stop-Motion Animation 3-4

Students use still cameras, audio recorders, and iMovie to create stop-motion animation films. These can be narrative (scripted) or experimental videos created from LEGO blocks, modeling clay, action figures, and other "found objects".

This introductory course covers the basics of using household objects and miniature construction to create a compelling story. The course provides an overview of photography, sound recording, and video editing as part of the filmmaking process.

The full list of goals, topics, and activities for this course will be posted soon.
